# Part F – Information on consolidated capital

## SECTION 1 – CONSOLIDATED CAPITAL

### A. Qualitative information

The control of capital adequacy both at consolidated level and at single entities level is ensured by capital management which defines the size and optimum combination of the different capital instruments in accordance with regulatory constraints and consistently with the risk exposure taken on by the Group.

The Intesa Sanpaolo Group assigns a primary role to the management and allocation of capital resources, considering this to be an instrument for strategic leverage, as well as a way to ensure consistency of the operating plans of the business units.

Once the Group's strategic profitability, capital position and liquidity objectives have been defined, capital and financial resources are allocated to the business units through a process that evaluates their growth potential, capacity to generate value and financial autonomy.

The capital at risk considered is twofold:

- regulatory capital covering Pillar 1 risks;
- overall internal capital covering Pillar 2 risks, for ICAAP purposes.

Regulatory capital and overall internal capital differ from each other by definition and by their coverage of risk categories. The first arises from formats defined in supervisory provisions, the second from operational measurements.

Hence, the capital management activity comprises the management of current and prospective capital adequacy through careful control of both regulatory Pillar 1 constraints (in compliance with Basel 3 rules, effective from 1 January 2014) and operational Pillar 2 constraints. Projections are also produced under stress conditions in order to ensure that the available resources are adequate to cover all risks, even in adverse conditions. Furthermore, since 2013, the Group has been drawing up a Recovery Plan, in line with regulatory indications (directives "Bank Recovery and Resolution Directive – BRRD" - 2014/59/EU transposed in Italy through Legislative Decrees 180 and 181 on 16 November 2015 and "Bank Recovery and Resolution Directive – BRRD II" - Directive (UE) 2019/879, transposed into Italian law on 8 November 2021 by Legislative Decree 193, which entered into force on 1 December 2021), with international practice and in compliance with both the Group Risk Appetite Framework and the crisis management model adopted by the Bank.

As part of the process of defining budget targets, a projection compatibility analysis is conducted annually at Group level and at the level of individual entities in the Group. Depending on the expected performance of balance sheet and income statement aggregates, the appropriate capital management measures to ensure the required financial resources for the individual business units are already identified in this phase, if necessary. Compliance with the target levels of capitalisation is monitored on a quarterly basis, taking appropriate action when necessary.

Compliance with capital adequacy is sought via various levers, such as the dividend distribution policy, the definition of strategic finance operations (capital increases, issue of convertible loans and subordinated bonds, disposal of non-core assets, etc.) and the management of investments, particularly loans, on the basis of counterparty risk.

Further analyses for preliminary assessment of capital adequacy are performed during extraordinary operations (mergers, acquisitions, disposals, etc.) whether internal to the Group or changing the scope of consolidation of the Group.

Following the Supervisory Review and Evaluation Process (SREP), the ECB annually makes a final decision on the capital requirement that Intesa Sanpaolo must comply with at consolidated level.

On 3 February 2022, Intesa Sanpaolo announced that it had received the ECB's final decision concerning the capital requirement that the Bank has to meet, as of 1 March 2022.

The overall capital requirement the Bank has to meet in terms of Common Equity Tier 1 ratio is 8.95%.

This is the result of:

- the SREP requirement in terms of Total Capital ratio of 9.79% comprising a minimum Pillar 1 capital requirement of 8%, of which 4.5% is CET1, and an additional Pillar 2 capital requirement of 1.79%, of which 1.01% is CET1 applying the regulatory amendment introduced by the ECB and effective from 12 March 2020<sup>115</sup>;
- additional requirements, entirely in terms of Common Equity Tier 1 ratio, relating to:
  - A Capital Conservation Buffer of 2.5%;
  - an O-SII Buffer (Other Systemically Important Institutions Buffer) of 0.75%;
  - a Countercyclical Capital Buffer of 0.19%<sup>116</sup>.

With effect from 30 September 2019, following permission from the ECB, the Intesa Sanpaolo Group calculates capital ratios applying the so-called Danish Compromise, under which insurance investments, held indirectly through Intesa Sanpaolo Vita, are risk weighted instead of being deducted from capital.

---

<sup>115</sup> The regulatory change establishes that the capital instruments not qualifying as Common Equity Tier 1 may be partially used to meet the Pillar 2 requirement.

<sup>116</sup> Countercyclical Capital Buffer calculated taking into account the exposure as at 31 December 2022 in the various countries where the Group has a presence, as well as the respective requirements set by the competent national authorities and relating to 2024, where available, or the most recent update of the reference period (requirement was set at zero per cent in Italy for 2022 and for the first quarter of 2023).

As stated in Part E, compared to 31 December 2021, with regard to the scope of application of internal credit risk models, the ECB's authorisation to use the new Retail models for regulatory purposes were implemented starting from September 2022, and the Institutions and Retail SME models starting from June 2021.

With regard to counterparty risk, the Banking Group improved the measurement and monitoring of the risk, by refining the instruments required under Basel 3. For reporting purposes, the Parent Company is authorised to use the internal models approach for the reporting of the requirement with respect to counterparty risk both for derivatives and for SFTs (Securities Financing Transactions, i.e. repos and securities lending). This authorisation was obtained for derivatives from the first quarter of 2014, and for SFTs from the report as at 31 December 2016.

For management purposes, the advanced risk measurement approaches have been implemented for the OTC derivatives of the Parent Company since 2010 and were subsequently extended in 2015 to Securities Financing Transactions.

Compared to 31 December 2021, it is noted that, starting in the second quarter of 2022, the eligibility rules for securities used as collateral in SFTs were revised, in light of the provisions of art. 271.2 CRR. In order to maintain a suitable level of control over the materiality of transactions previously considered at full risk, a concentration limit was introduced on guarantees that have low levels of liquidity or creditworthiness. A new assessment process was also defined for guarantees comprised of senior securitisation tranches, to make them eligible to mitigate exposures deriving from SFTs.

Starting in the fourth quarter of 2022, in response to the request from the ECB, a process was activated to exclude from the internal counterparty risk model those transactions whose valuation does not comply with the consistency thresholds between the risk and front office systems.

With regard to operational risk, the Group obtained authorisation to use the Advanced Measurement Approach (AMA – internal model) to determine the associated capital requirement for regulatory purposes, with effect from the report as at 31 December 2009. As at 31 December 2022, the scope of the Advanced Measurement Approach (AMA) is comprised of Intesa Sanpaolo (including the former Banks and Companies merged into it) and the main banks and companies in the Private Banking and Asset Management Divisions, as well as of VUB Banka and Privredna Banka Zagreb.

On 15 December 2022, Intesa Sanpaolo announced that it had received the ECB's final decision concerning the capital requirement that the Bank has to meet, as of 1 January 2023.

The overall capital requirement to be met in terms of Common Equity Tier 1 ratio is currently 8.91%.

This is the result of:

- the SREP requirement in terms of Total Capital ratio of 9.72% comprising a minimum Pillar 1 capital requirement of 8%, of which 4.5% is CET1, and an additional Pillar 2 capital requirement of 1.72%, of which 0.97% is CET1 applying the regulatory amendment introduced by the ECB and effective from 12 March 2020;
- additional requirements, entirely in terms of Common Equity Tier 1 ratio, relating to:
  - A Capital Conservation Buffer of 2.5%;
  - an O-SII Buffer (Other Systemically Important Institutions Buffer) of 0.75%;
  - a Countercyclical Capital Buffer of 0.19%<sup>117</sup>.

The transitional period, which will end with the last reporting date as at 31 December 2022 and is aimed at mitigating the capital impacts linked to the introduction of the new financial reporting standard IFRS 9, started from 1 January 2018. Intesa Sanpaolo has exercised the option provided in EU Regulation 2395/2017 to adopt the "static" approach that allows the neutralisation of a progressively decreasing amount of the impact of IFRS 9 in its CET 1 relating solely to the FTA component of the impairment. In particular, the result from the comparison between the IAS 39 adjustments at 31 December 2017 and the IFRS 9 adjustments at 1 January 2018 – relating to performing loans and securities (stage 1 and 2) and adjustments to NPLs (stage 3), net of tax and having eliminated any existing shortfall – is re-included in the capital according to phase-in percentages of 70% in 2020, 50% in 2021 and 25% in 2022. Within the framework of the COVID-19 pandemic scenario, Regulation (EU) 2020/873 of 24 June 2020, amending Regulations (EU) 575/2013 (CRR) and Regulation (EU) 2019/876 (CRR 2) containing temporary support provisions in terms of capital and liquidity, was published with an accelerated approval procedure (the "quick fix"). Among the provisions set out in Regulation (EU) 2020/873 relating to the calculation of own funds, the Intesa Sanpaolo Group opted not to use, since 30 June 2020, either the changes to the transitional regime for the application of IFRS 9 (art. 473 bis of the CRR) or the temporary reintroduction of the prudential filter aimed at excluding unrealised gains and losses measured at fair value through other comprehensive income (FVOCI) on exposures to central governments and public sector entities (art. 468 CRR).

Lastly, since 31 December 2020, the Intesa Sanpaolo Group has applied Commission Delegated Regulation (EU) 2020/2176, which entered into force on 23 December 2020 and amends Commission Delegated Regulation (EU) 241/2014 with regard to the deduction of software assets from Common Equity Tier 1 items. The Regulation, which is, inter alia, intended to support the transition to a more digitalised banking sector, introduces the criterion of prudential amortisation applied to all software assets over a three-year period, regardless of their estimated useful lives for accounting purposes. Specifically, the difference, where positive, between prudential cumulative amortisation and accounting cumulative amortisation (including impairment losses) is fully deducted from CET1.

<sup>117</sup> See the previous note.

**B. Quantitative information****B.1. Consolidated book shareholders' equity: breakdown by type of company**

The table above indicates the components of net book value, adding those of the Group to those of third parties, broken down by the type of consolidated company. In further detail, the column for the Banking group indicates the amount resulting from the consolidation of the companies belonging to such group, gross of the effects on the income statement of transactions with other companies within the scope of consolidation. Subsidiaries other than those belonging to the Banking group and consolidated on a line-by-line basis are stated at equity. The columns Insurance companies and Other companies contain the amounts resulting from consolidation, gross of the effects on the income statement of transactions with companies belonging to the Banking group. The columns Netting and Adjustments on consolidation show the adjustments required to obtain the figure presented in the financial statements.

**Trading on treasury shares**

During the year, Intesa Sanpaolo and the Group companies – on the basis of specific Shareholders' Meeting authorisations – carried out the following transactions on treasury shares of the Parent Company Intesa Sanpaolo:

Ordinary shares:		
Initial number	no.	40,481,556
Purchases	no.	1,035,246,253
<i>of which to be annulled (buyback)</i>	<i>no.</i>	<i>988,632,803</i>
Sales	no.	-1,019,021,022
<i>of which annulment of shares subject to buyback</i>	<i>no.</i>	<i>-988,632,803</i>
End-of-year number	no.	56,706,787

***B.4. Valuation reserves relating to the defined benefit plans: annual changes***

During the year, the reserves at issue recorded an increase of 182 million euro. Therefore, as at 31 December 2022 there was an overall negative reserve equal to approximately 242 million euro for defined benefit plans.

**SECTION 2 – OWN FUNDS AND CAPITAL RATIOS FOR BANKS**

Reference is made to the “Basel 3 Pillar 3” public disclosure as at 31 December 2022 for the disclosure on own funds and capital adequacy.
