# Italian Market: Equity Post Results

## A Post-2Q Results Season Quick Overview

The 2Q21 results season registered the highest level of earnings beats in our sample since 2013, with both Financials and Non-Financials contributing to the trend, thanks to the reacceleration of economic growth and an easy comp base with depressed 2Q20 levels. Overall, based on our previews' sample (79 companies), we had 63% results above, 30% in line, and 6% below. YE21 guidance was generally confirmed or slightly improved, as listed companies were able to cope with rising production costs (Non-Financials), although cost inflation remains a challenge going forward.

### Financials on a steady path

Financials had another sound quarterly season in 2Q21: out of 17 companies in our sample, 13 reported above, 1 in line, and 3 below. Banks were driven by strong revenues growth and positive trend in asset quality; asset gatherers were backed by strong performance fees and cost control; insurers were once again supported by positive non-life technical profitability.

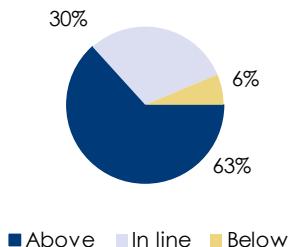

### Non-Financials managing cost inflation

Out of the 62 companies in our preview sample, 60% were above, 37% in line and only 3% below, improving vs. last quarter. Autos benefitted from volumes recovery and a better price mix, as a response to cost inflation, while Construction (op. leverage) and Real Estate were in line. The picture was positive for Branded Goods (driven by wholesale and cost savings); the same applies to Consumer G&S (demand recovery; sales mix). We had a few earnings beats in Industrial G&S (volumes recovery, cost control) and a sound trend in Pharma. Mixed picture in Oil & Gas (better upstream pricing; subdued refining), with Utilities broadly in line. We had earnings beats in Media (recovery in adv. and cost savings), with TLC Services broadly in line.

### Where next in 2H21?

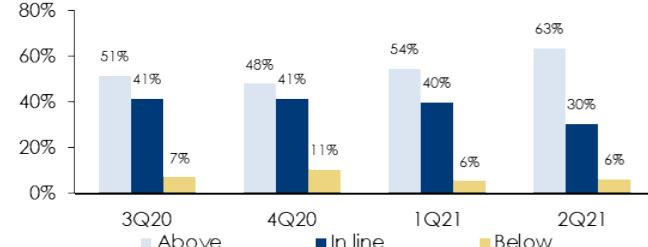

Coming to YE21 guidance, the picture looks overall supportive, as several companies either confirmed or slightly improved outlook, across sectors. So far, listed companies were able to cope with rising production costs (Non-Financials), although cost inflation remains a challenge going forward, along with potential disruptions in the supply chain.

## Equity Research Publications in Last 12M

The list of all recommendations on any financial instrument or issuer produced by Intesa Sanpaolo Research Department and distributed during the preceding 12-month period is available on the Intesa Sanpaolo website at the following address:

## Valuation methodology (long-term horizon: 12M)

The Intesa Sanpaolo SpA Equity Research Department values the companies for which it assigns recommendations as follows:

We obtain a fair value using a number of valuation methodologies including: discounted cash flow method (DCF), dividend discount model (DDM), embedded value methodology, return on allocated capital, break-up value, asset-based valuation method, sum-of-the-parts, and multiples-based models (for example PE, P/BV, PCF, EV/Sales, EV/EBITDA, EV/EBIT, etc.). The financial analysts use the above valuation methods alternatively and/or jointly at their discretion. The assigned target price may differ from the fair value, as it also takes into account overall market/sector conditions, corporate/market events, and corporate specifics (i.e. holding discounts) reasonably considered to be possible drivers of the company's share price performance. These factors may also be assessed using the methodologies indicated above.

## Equity rating key: (long-term horizon: 12M)

In its recommendations, Intesa Sanpaolo SpA uses an "absolute" rating system, which is not related to market performance and whose key is reported below:

### Valuation methodology (short-term horizon: 3M)

Our short-term investment ideas are based on ongoing special market situations, including among others: spreads between share categories; holding companies vs. subsidiaries; stub; control chain reshuffling; stressed capital situations; potential extraordinary deals (including capital increase/delisting/extraordinary dividends); and preys and predators. Investment ideas are presented either in relative terms (e.g. spread ordinary vs. savings; holding vs. subsidiaries) or in absolute terms (e.g. preys).

The companies to which we assign short-term ratings are under regular coverage by our research analysts and, as such, are subject to fundamental analysis and long-term recommendations. The main differences attain to the time horizon considered (monthly vs. yearly) and definitions (short-term 'long/short' vs. long-term 'buy/sell'). Note that the short-term relative recommendations of these investment ideas may differ from our long-term recommendations. We monitor the monthly performance of our short-term investment ideas and follow them until their closure.

### Equity rating key (short-term horizon: 3M)

Short-term rating	Definition
LONG	Stock price expected to rise or outperform within three months from the time the rating was assigned due to a specific catalyst or event
SHORT	Stock price expected to fall or underperform within three months from the time the rating was assigned due to a specific catalyst or event
